

**MEMBERS IN SESSION:**

---

**PB03-014**

**Crocker Art Museum Expansion and 2<sup>nd</sup>  
Street Realignment for Parking**

**REQUEST:**

**Provide Board recommendations on the proposed expansion of the Crocker Art Museum and 2<sup>nd</sup> Street Realignment for Parking**

**LOCATION:**

**216 O Street  
(APN: 006-0183-012, 006-0185-001 thru 004)  
Several City blocks located between N and P Streets  
and the I-5 Freeway and 3<sup>rd</sup> Street.  
Council District 1**

**SUMMARY:**

This project, including a major expansion/addition to the National Register of Historic Places-listed Crocker Art Museum, and the realignment of 2<sup>nd</sup> Street for parking, has been before the Design Review & Preservation Board (Board) on several prior occasions for review and comment. Per City Code, where there is a project involving City-owned property, the Board is asked to review and make recommendations to the City on the project. This hearing is the final review and comment on the project by the Board prior to the City Council's action certifying the environmental document for the project and approving the project.

**BACKGROUND:**

Due to scheduling problems between the project architect, city staff, project managers, and hearing dates, a committee of the Board met on August 17, 2005, with the project architects to review the final design development plans, and to prepare draft recommendations for the Board to review and adopt at its September 7, 2005, hearing. The Board's committee members included Board landscape architect Christopher Elliott, Board architect Bob Chase, and Board architectural historian Andrew Hope.

**COMMITTEE RECOMMENDATIONS:**

The Committee recommends that the Board adopt the following comments as the Board's recommendations on the project:

1. **Passenger drop-off area on "O" Street:** The plans presented to the Committee, attached, show the proposed drop-off area directly in front of the historic Crocker Art Museum structure.  
**RECOMMENDATION:** that the proposed passenger drop-off curb cut be moved west past the historic structure into the area generally between the historic and the new structures, and thereby retain the historic streetscape in front of the historic structure. It is understood that there may be a need to remove a tree with this recommended new alignment/location.

2. **Materials and color pallet for new structure:** The materials and color pallet presented to the Committee extremely well received.  
RECOMMENDATION: The Committee highly recommends the proposed materials and color pallet.
3. **Parking areas and park-block pedestrian paths:** The Committee reviewed landscape concept plans for the parking and park path alignments in and around the park-block immediately north, across "O" Street from the museum complex. The Committee was concerned that there was no provision for pedestrian walkways, except into the street, for the proposed angled parking on the north side of "O" Street.  
RECOMMENDATION: that a decomposed granite pathway, of a minimum 4-ft width, be constructed at the inside curb of the park , adjacent to any parking, on all sides of the park.
4. **Street trees:** There was discussion about street trees replacement at both sides of "O" Street, if existing trees will need to be removed.  
RECOMMENDATION: that replacement street trees, species and placement, mirror each other on each side of "O" Street, and that they flank the historic "O" Street approach to the historic structure. Native sycamore or tulip trees were suggested as possible replacement species.

**STAFF RECOMMENDATION:**

During the Committee's meeting staff questioned the proposed new "gate" over the side entryway stairs leading into a proposed new lower-level west-elevation entry to the historic building. While the "gate" does not physically connect with the historic building, there are potential visual connections/impacts that still strongly concern Staff, and there are discrepancies in the plans relative to this matter that need to be resolved. The attached HMR plans show the "gate's" east edge ending approximately\* one foot west from the historic building's west wall. The attached Gwathmey plans show the "gate's" east edge crossing approximately\* one foot in front of the historic building's north, primary elevation. However the site plan on the Crocker expansion website does not show the "gate" crossing in front of the historic building, but ending back/south from the historic building's front elevation, see attachment last sheet. Staff strongly recommends the HMR option be included in the recommendations to the City's project manager and City Council, as follows:

5. **Gate feature over proposed entry to west elevation of historic art gallery:**  
RECOMMENDATION: That the option shown in the HMR drawings be the recommended option, which shows the east edge of the "gate" maintaining a distance of approximately one foot to the west of the historic building.

**ENVIRONMENTAL ISSUES:**

An EIR has been prepared for the project and that document will be presented to the City Council for its review and certification as part of its action to approve the project.

**RECOMMENDATION:**

The Committee recommends that the Board adopt its proposed recommendations and forward them to the City's Crocker Expansion project manager and the City Council.

Respectfully submitted,

  
Roberta Deering, Preservation Director

Attachments – Crocker Expansion Plans

\* due to the drawings being reduced and the scale difficult to determine, it appears to Staff that this distance shown is approximately one foot.
